Hello.

While many things have changed over the last 30 years, Crane's commitment to embracing the latest technology in effective integrated building-management systems hasn't.

From the design and installation of fire and intruder alarms to access control systems and CCTV, our business is to keep your business safe, secure and protected. And through AVICom, our state-of-the-art audio-visual information and communication division, we ensure that where your organisation needs a system to inform or entertain, or one that simply enhances business opportunities, our applications and specialist knowledge can make all the difference.

With an established and successful track record, coupled with direct relationships with the world's leading manufacturers, Crane also continues to deepen its relationship with its clients, listening and designing, installing and maintaining effective integrated building-management and audio-visual systems across Ireland and the United Kingdom.

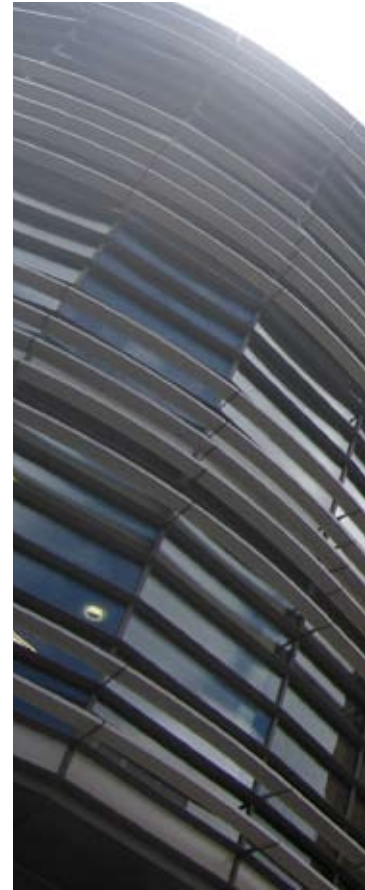

Commercial Security Systems

Crane has been responsible for the design, delivery, installation and maintenance of some of the most complex and high profile integrated fire and security systems in the UK and Ireland.

Working closely with, and advising architects, specifiers and consulting engineers, in recent years Crane has worked on a number of signature projects across these islands.

These have included multiple projects for Debenhams across Great Britain, Fairgreen Shopping Centre in County Carlow and the Belfast's 75,000m², £320 million landmark development, Victoria Square.

Irrespective of size, regardless of location and whatever its purpose – shopping centre, public authority, private business, university, government department, hotel, health club or retail outlet, ensuring and maintaining a safe, secure and protected environment for all is what we have become known and respected for.

Using a central data gathering control system, or enabling the integration of different systems with one common user-interface, you can be assured that it has been designed and installed to the highest industry standard.

Designing effective integrated fire and security systems in projects for a diverse range of clients, we incorporate the latest state-of-the-art technology, integrating:

- Access Control Systems
- Intruder Alarm Systems
- CCTV
- Fire Detection and Alarm Systems.

Retail Security Systems

When it comes to the retail environment, Crane has developed a recognised specialism in electronic and physical security systems.

Working alongside retailer/security manager, or the retailer's consulting engineer, the integration of technologies such as CCTV and Electronic Article Surveillance Systems, also known as 'tagging', ensures the safety of staff and customers and the protection of stock from shrinkage and theft.

Physical security in a retail environment is essential, especially when considerable amounts of cash are on the premises. Unless it is secured at its final position before it is transferred off the premises, all you have really done is move the cash from one area to another.

Through our experience in physical security devices, from safes to strong-room doors that provide access to your cash office, we help you to do more with what you have. Physical and Electronic security and effective cash retrieval, also known as pneumatic conveying systems, are therefore, important. You may have the problem, with over 30 years experience, we have certainly have the solution.

Experience that is extensive and advice that has been tried and tested, our approach to understanding and meeting the requirements of larger retailers or smaller single unit retail outlets doesn't vary.

But it does include:

- Cash Retrieval Systems
- Physical Security Systems
- Electronic Article Surveillance Systems
- Access Control Systems
- Intruder Alarm Systems
- CCTV
- Fire Detection and Alarm Systems.

Audio-Visual Information Communication Systems

Informing, creating greater understanding and awareness, providing information to clients, customers and employees, or motivational music to flagging gym goers requires more than a passing interest in AV and its general application.

Through our AVICom division, Crane designs, procures, installs and maintains all of its clients' bespoke Audio-Visual Information Communication Systems. A comprehensive service provided by our own skilled staff.

Why? Because we seek a relationship with you and not just you're a piece of your business.

Presenting to potential clients in your boardroom, communicating information in real time for weary passengers, or helping church-goers worship in a new way through state-of-the-art technology, requires an ability to apply and integrate AV information and communication solutions in a way that does more than meet a basic need.

Diverse organisations and businesses, from health clubs to hospitals, public transport authorities to pubs and clubs often need similar things. Having got to know you and understand your requirements, we can apply the technology to meet the needs you may have and those you didn't think of.

You may know what you want, but working together we can advise on what you really need.

With that in mind, we help to design the specification with you and depending on your requirements Crane can provide:

- Customer Information Systems
- LCD/Plasma Screen Technology
- Video Conferencing Facilities
- Surveillance Systems
- Presentation Systems
- Disabled Refuge Systems
- Intercom Systems
- PA Systems
- Entertainment Systems.

Planned Maintenance and Service

Getting the job done is only half of the picture.

Planned Maintenance and Service may seem mundane, but it's essential if you are to get the best from the system at all times. It's also essential that it's done professionally.

With certain integrated technologies, fire detection systems in particular, there are legislative requirements to maintain them on a regular basis, and with intruder alarm systems, if a police response is required, they will insist that your system is maintained regularly.

One thing you will find about our company is that we desire an ongoing relationship that keeps you fully protected. With that in mind, should you need us, we're your first port of call.

Crane provides a full range of maintenance service through our service engineers in our Dedicated Service Team providing:

- Planned preventative maintenance
- 24 hour on-call support and
- Pay as you go service calls.

Find out more.

If you would like to find out how we can integrate technology into your future plans and developments call Crane Communications today.
